(A) Data access
ImageDataInterface
Zarr • N5 • OME-Zarr
S3 • precomputed://
— via TensorStore —
multiscale + ROI indexing
chunks aligned to model
input shape / voxel size
(B) Compute
Inferencer
adapters: TorchScript,
DaCapo, BioImage.io,
HuggingFace, cellmap-models
normalize → GPU forward
(FP16, context padding)
→ output post-process
(C) Service
Server mode:
Flask → virtual Zarr over
HTTP → Neuroglancer
(on-demand chunks)
Blockwise mode:
Daisy → LSF GPU workers
→ output Zarr
YAML configuration — single source of truth (input · model · normalizers · post-processors · output / workers)
